WHAT DO THEY MEAN?

Global Recycled Standard (GRS)

The Global Recycled Standard (GRS) is an international, voluntary, full product standard that tracks and verifies a product's recycled content, chain of custody, social and environmental impact and chemical restrictions.

The objective of the GRS is to define requirements to ensure accurate recycled content claims.

Recycled Claim Standard (RCS)

The Recycled Claim Standard (RCS) is used as a chain of custody standard to track recycled raw materials through the supply chain.

The GRS/RCS logo ensures the materials used in the product are genuinely recycled.

> 90 Seconds Quick Clean or
> 5 Minutes Complete Clean

ITSN 103 - HORKI

UV-C steriliser that kills up to 99.9% of the bacteria placed inside the device. Simply place objects like earbuds, jewelery, watches and facemask inside the steriliser to sterilise them using UV-C technology. You can choose to do a quick clean in 90 seconds or a complete clean in 5 minutes. The 2 UV-C LED light inside is non-toxic and made without mercury unlike many unsafe UV lamps in the market. The design will also ensure that the UV-C led light will switch off automatically when the box is opened so the user will not be exposed to the UV-C light. The lights have a lifecycle of 10,000 hours.

ITBH 102 - ARBON

@memorii Let the music flow with these true wireless earbuds in a charging case. Equipped with UV sterilization, this TWS is cleaner and safer to use. Simply put the earbuds in the charging case and the UV will automatically sterilize the bacteria for 90 seconds. While the case is opened in the progress of sanitizing, the process will be stopped immediately to protect the user from harmful UV-C light. The earbuds have a 35 mAh battery and can be re-charged in the 300 mAh charging case. With auto pairing function so easy to pair to your mobile device. Playing time on medium volume about 2 hours. With BT 5.0 for optimal connection. Operating distance up to 10 metres. With pick up and mic.

How the card holder protects?

The aluminium Cardprotector protects your most important plastic cards not only against bending and breaking, but also against malicious parties reading your RFID and NFC cards. RFID (Radio Freqency IDentification) cards contain a chip and an antenna for wireless communication. Examples of RFID cards include the Travel card, ID cards, the latest generation of credit cards and bank cards, as well as various access passes.

Using the Cardprotector

The Cardprotector can hold a maximum of 7 cards. If only embossed cards are used, the capacity is 5 cards. Position the cards you use the most at the back or front and they will slide out sufficiently to be used. Slide out the cards with ONE movement of the slider on the side. The radio signal, although still greatly reduced, will now be sufficient for contact over a short distance. This means that you can use your RFID-NFC cards easily and securely. After use, slide your cards back into the Cardholder by pressing down on them lightly.

> 6 embossed cards
